ABOUT THIS REPORT

What is inside

Guided session available

Want help making sense of this report? Message us on WhatsApp at [WhatsApp Number] to schedule a session. It is not a sales call.

■ Your thinking style

How you process information and where you do your best work

■ Your strengths and blind spots

Drawn directly from your answers, not a generic template

■ Three career deep-dives

Each career covered fully: fit, paths, stream guidance, degrees, internships and your first 30 days

■ Parent summary

So they understand your direction without you having to explain everything

SECTION 1 — YOUR THINKING STYLE

How You Think

You tend to pause and take in all sides before you speak or decide. When someone's upset, you listen first. When you're curious about something, you might wonder where to start instead of diving straight in. You prefer breaking things into steps rather than winging it, and you often note things down instead of reacting immediately.

This careful approach means you rarely make snap decisions you regret later, and people probably trust you to handle tense situations without making them worse. The flip side is that sometimes you delay starting because you're still figuring out the right entry point, and you might push through when you're drained instead of stepping back to recharge or rethink the plan.

SECTION 2 — STRENGTHS AND BLIND SPOTS

What your answers showed

Your strengths

- You bounce back fairly quickly when things don't go as planned. You don't stay stuck on what went wrong, which means you can keep building and trying new things without getting weighed down by earlier setbacks.
- You care about people feeling okay, even when it's inconvenient for you. That quality shows up when you help someone anyway, and it's the kind of thing that makes you a good collaborator and someone others want to work with.
- You lose track of time when you're creating things that move or connect people. That flow state is rare and valuable, and it tells you where your energy naturally goes when nothing's forcing it.
- You have a solid grasp of language and how words work. English comes easily to you, which gives you a real edge whether you're writing, explaining ideas, or shaping how something feels to an audience.
- You're drawn to both building and connecting, which means you're not just interested in making things work technically but also in whether they matter to people. That overlap is what separates products that exist from products that people actually use.

Areas to watch

- You sometimes feel drained but push through anyway. That works in the short term, but over time it can lead to burnout or resentment, especially in work that demands constant output. Worth checking in with yourself about when pushing through is helpful and when it's just depleting you.
- You want to feel secure and stable, but the paths you're drawn to (startups, creative work, making things that connect people) don't always offer that at first. That tension might make you hesitate or second-guess yourself when opportunities feel risky, even if they're aligned with what you care about.
- You're curious but sometimes unsure where to start, which can lead to circling around an idea instead of testing it. One way to work with this is to lower the bar for what counts as a first step, just enough to get something in motion without needing the whole map upfront.

CAREER 1 OF 3 — BUILDING DIGITAL PRODUCTS PEOPLE ACTUALLY USE

Building digital products people actually use

Why this fits you

You chose to shadow a startup founder, you said you want to work on things you've built or created, and you lose track of time creating things that move or connect people. Building digital products sits right at that intersection: you're making something tangible that solves a problem, and then watching real people use it. Your interest in tech and computers gives you the toolkit, and your academic strength in language means you can explain what you're building in ways that matter to users.

Paths within this domain

› Product Manager

You talk to users to figure out what they need, work with engineers and designers to build it, and decide what gets built next based on what actually works.

› UX/UI Designer

You design the screens, buttons, and flows people interact with when they use an app or website, making sure it feels intuitive and looks good.

› Frontend Developer

You write code that turns designs into the actual interface people see and click on, making websites and apps work smoothly in a browser or on a phone.

› Startup Founder (Tech)

You identify a problem people have, build a digital product to solve it, and figure out how to grow a business around that product.

› Product Growth Analyst

You look at how people use a product, run experiments to see what keeps them coming back, and suggest changes that help the product grow.

Undergraduate degrees to consider

› Computer Science Engineering

Gives you the technical foundation to build software, understand how systems work, and collaborate with engineering teams or code yourself.

› Information Technology

Focuses on how technology gets applied to solve real-world problems, with some coding and a lot of systems thinking.

› Design (Interaction, Communication, or Product Design)

Teaches you how to create user experiences, prototype ideas, and think visually about how people interact with digital products.

› Business Administration or Management

Useful if you want to focus on the strategy, growth, and business side of building products rather than the technical execution.

› Economics or Data Science

Helps you understand user behaviour, run experiments, and make decisions based on what the data tells you about how people use products.

Guidance reflects general pathways across boards. Your counsellor will personalise this for your specific board, location and current subjects on the call.

Your next 30 days

Build a small product this month: a simple tool, app, or website that solves one real problem you face. Start on Devfolio or AngelList India to see how founders pitch their ideas. Follow one startup founder's journey on LinkedIn and note how they talk about their users.

CAREER 2 OF 3 — WRITING AND CREATING STORIES THAT RESONATE

Writing and creating stories that resonate

Why this fits you

You already spend your free time reading or going deep on topics you care about, and English is a strength that comes naturally to you. You said you want to create things that move or connect people, and storytelling does exactly that, whether it's through a novel, a screenplay, or a long article. You also care about making a real difference, and stories shape how people think and feel about the world. The work itself can feel stable over time as you build a body of work people return to.

Paths within this domain

› Author or novelist

Writers spend their days drafting chapters, revising scenes, and shaping characters and worlds that readers connect with emotionally.

› Screenwriter or script editor

Screenwriters develop dialogue, structure scenes, and build narratives for films, web series, or television shows that move audiences.

› Journalist or feature writer

Journalists research stories, interview people, and write articles that inform or challenge how readers see current events and culture.

› Content strategist or brand storyteller

Content strategists craft narratives for brands or organisations, making sure the tone, message, and story feel consistent and compelling across platforms.

› Editor or literary agent

Editors work closely with writers to refine manuscripts, shape narratives, and bring stories to readers in their strongest form.

Undergraduate degrees to consider

› BA in English Literature

Opens doors to publishing, editing, journalism, and any field where strong writing and critical reading matter.

› BA in Creative Writing

Builds skills in fiction, poetry, and narrative craft, often with workshops and feedback loops that help you find your voice.

› BA in Journalism and Mass Communication

Prepares you for reporting, feature writing, and media work where storytelling meets real-world research and deadlines.

› BA in Film Studies or Screenwriting

Teaches visual storytelling, script structure, and how narratives work on screen, whether for cinema or digital platforms.

› BA in Liberal Arts or Humanities

Gives you space to study literature, philosophy, and culture while developing the critical thinking and writing that underpin all storytelling work.

Guidance reflects general pathways across boards. Your counsellor will personalise this for your specific board, location and current subjects on the call.

Your next 30 days

Write one short story or essay (500-1000 words) on something you care about. Read one book or follow one writer whose work moves you. Start a simple blog or document where you publish what you write; share one piece with a friend and ask for honest feedback.

CAREER 3 OF 3 — MAKING MUSIC AND SOUND EXPERIENCES

Making music and sound experiences

Why this fits you

You said music matters to you, and you want to create things that move or connect people. Music and sound work is exactly that: building emotional experiences from scratch. You also care about what you've built, and producers, composers, and sound designers literally construct worlds out of sound. The playful, social side of you fits how musicians jam, collaborate, and perform together. Your English aptitude helps here too — lyrics, storytelling through songs, and communicating ideas in sessions all rely on language.

Paths within this domain

› Music Producer

A music producer shapes songs from raw recordings, arranging instruments, guiding artists, and mixing tracks until they sound polished and emotionally compelling.

› Sound Designer for Games or Film

A sound designer creates every audio element in a game or movie, from footsteps to explosions, building atmosphere and emotion through layered sound.

› Composer for Media

A composer writes original music for films, shows, ads, or games, translating a story's mood into melodies and harmonies that audiences feel.

› Audio Engineer

An audio engineer records, edits, and mixes sound for albums, podcasts, or live events, making sure everything sounds clean, balanced, and intentional.

› Singer-Songwriter or Independent Musician

A singer-songwriter writes, performs, and releases their own music, building a fanbase through streaming platforms, gigs, and social media.

Undergraduate degrees to consider

› Bachelor of Music (B.Mus) in Performance, Composition, or Production

Trains you in theory, composition, and performance, opening doors to studio work, teaching, or freelance music creation.

› BA in Sound Engineering or Audio Production

Focuses on the technical side of recording, mixing, and post-production, preparing you for studio or live sound roles.

› BFA in Music Production or Music Technology

Blends creative and technical training, teaching you to produce, arrange, and engineer music for different media.

› Bachelor of Arts with a major in Music or Musicology

A broader arts degree with a music focus, useful if you want flexibility to combine music with writing, media, or education.

› Diploma or Certificate in Music Production from a private institute

Shorter, focused programs that get you hands-on with software and studio work quickly, often more affordable than full degrees.

Guidance reflects general pathways across boards. Your counsellor will personalise this for your specific board, location and current subjects on the call.

Your next 30 days

Listen actively to three songs or soundtracks and note what emotions they create and why. Try using free music production software like GarageBand or Audacity to layer sounds or remix something you like. Watch one video interview with a music producer or composer about their process.

PARENT SUMMARY

For parents to read

This page is written for you.

The rest of the report is written for your child. This page is for you.

Your child thinks through problems methodically, breaks them into steps, and takes the time to understand different perspectives before jumping in. They're drawn to creating things that connect people or move them emotionally, whether through technology, writing, or music. They want both creative expression and stability, which sometimes feel at odds.

The assessment identified three directions: building digital products people use, writing stories that resonate, and making music or sound experiences. You've probably noticed them lose track of time when creating something, or go deep into topics they care about. They admire people who've built things that matter, not just those with impressive titles.

For stream and subject choices, keeping English strong makes sense given their natural aptitude. Computer Science or Humanities could both work, depending on whether they lean towards tech or storytelling right now. Worth talking through: how they picture balancing creative work with the financial security they also value, and what small experiments they could try this year.

Want a guided session?

Want to talk through this report with someone? Message us on WhatsApp at [WhatsApp Number] to schedule a session. Bring your questions, your doubts, and anything that did not feel right.

WHAT HAPPENS NEXT

Three things to do now

1**Read the career that pulled you most**

Not the most impressive one. The one where you felt something while reading it. Go back to that chapter and read the 30-day step at the end.

2**Do the 30-day step for that career**

It is one specific action. It takes less than an hour to start. Do not wait until you feel ready.

3**Reach out if you want guidance**

Message us on WhatsApp at [WhatsApp Number] to schedule a session. Bring one question about this report and your next steps.

CareerShifu 2025 · Confidential, for the student named on the cover only. Guidance reflects general pathways across boards. Specific college options, entrance exams and cutoffs can be explored in a guided session — message us on WhatsApp to schedule.
